**Abstract**

This research addresses gender inequalities in medical education and professional careers, focusing on Italy's medical specialties where gender imbalances persist despite high feminization in training. The project aims to identify psychological, cultural, organizational, and social factors driving gender segregation across specialties, which often correlates with wage and career disparities. Using a multidisciplinary, mixed-methods approach, the study will analyze nationwide data and conduct an in-depth case study in Piedmont, a key region for medical training. The goal is to better understand the social processes and stereotypes behind this professional segregation.
